

ALUMNI DATA MANAGEMNET SYSTEM (ADMS)

COLLAGE OF COMPUTER ——— INFORMATION TECHNOLOGY DEPATMENT

Mohammed AlJamal - 431109157

SUPERVISOR: Dr. Daniyah Aloqalaa

Students: Muath AlBuraidi - 421109543

Abdullah AlRashed - 421108116

INTRODUCTION

- Alumni are valuable to universities because they support networking, institutional development, and long-term collaboration
- ADMS is a web-based platform developed for the College of Computer at Qassim University to organize alumni data in one place.
- The system helps the college manage records, publish announcements, view statistics, and communicate with graduates. It also allows alumni to update their profiles and stay connected.

METHODOLOGY

- Development approach: Software Development Life Cycle (SDLC).
- Phases: Planning, Analysis, Design, Implementation, Testing, and Maintenance.
- System design relied on analysis artifacts such as use case modeling and structured data organization.
- Two main user roles were defined: Administrator and Alumni.
- Core modules include authentication, alumni records management, profile management, announcements, search & filtering, and statistics/reporting.

CONCLUSION

- ADMS provides a reliable and user-friendly solution for managing alumni data.
- The system helps the college maintain records, publish updates, and access useful statistics
- It also allows graduates to stay connected with the college and keep their information up to date
- Future enhancements may include job opportunities, stronger networking features, and wider university deployment
