01 INTRODUCTION

HackHero is an AI-powered platform designed to build a cyber-aware generation, directly supporting **Saudi Vision 2030** in its goal to achieve a secure and robust digital transformation.

Hackhero approach is built on four core pillars for maximum impact :

1. Gamified Learning

Engaging cybersecurity training through interactive gameplay.

3. Performance Tracking

AI analysis of strengths and weaknesses with improvement recommendations.

2. Adaptive Challenges

AI-generated scenarios tailored to individual performance and skill levels.

4. Social Competition

Multiplayer modes and wagering challenges to foster a secure community.

02 METHODOLOGY

A multi-layered framework integrating AI-driven dynamism with robust software engineering.

MongoDB

Express.js

React

Node.js

AI Engine

Figma

Research & Planning

System Architecture

Core Implementation

Evaluation & Testing

03 EXPERIMENTS

SAMPLE OF USERS VISITED

HACKHERO WEBITE AND TESTED IT

Interface rated smooth, intuitive, and easy to navigate even for non-technical users

Gameplay measurably improved participants' ability to apply cybersecurity knowledge beyond theory

Results validate HackHero's gamification-driven learning model

04 GAMES

HackHero makes learning cybersecurity felt like playing a game through **7 standalone interactive games**

Phishing Hunter

Train your eye to catch deceptive emails before they catch you.

Firewall Defender

Stand between the network and incoming attacks.

Hack Race

Every second counts. Make the right call before it's too late.

Privacy Awareness

Understand what you share, and why it matters.

Cyber Escape Room

Team up, think fast, and escape a live network breach in under 10 minutes.

Password Maker/Breaker:

Build strong passwords, then try to break them.

Secure Coding Challenge

Find the flaw. Fix the code. Stop the breach.
