

A WEB-BASED SYSTEM FOR MANAGEMENT GRADUATION PROJECTS

1 INTRODUCTION

The management of graduation projects at Qassim University currently relies on manual processes such as emails and spreadsheets, leading to inefficiencies, delays, and lack of centralized tracking.

This project proposes a web-based system (GPMS) to automate and streamline the entire graduation project lifecycle by providing a centralized system for students, supervisors, and administrators.

OVERVIEW

The GPMS is a web-based system designed to automate and streamline the graduation project lifecycle. It provides a centralized system for students, supervisors, and administrators to manage projects efficiently.

Centralized
Management

2 METHODOLOGY

The system is designed as a web-based system using modern development approaches:

- **Backend:** Laravel (PHP)
- **Frontend:** HTML, CSS, JavaScript
- **Database:** MySQL

The system follows a structured workflow including:

- ✓ Team creation and management
- ✓ Proposal submission and approval
- ✓ Supervisor assignment
- ✓ Progress tracking
- ✓ Communication and file sharing

It uses role-based
access control for:

- Students
- Supervisors
- Committee Members
- Head of Department
- Admin

User experience

Real-time Tracking

3 EXPERIMENTS / IMPLEMENTATION

The system implementation includes:

- ✓ Developing modules for each user role
- ✓ Testing system functionality (Functional Testing)
- ✓ Performance and usability evaluation
- ✓ Security validation (authentication & data protection)

The system was evaluated based on:

System

efficiency

4 CONCLUSION

The GPMS provides a centralized, efficient, and secure solution for managing graduation projects.

- ✓ It improves communication
- ✓ Reduces administrative workload
- ✓ Enhances collaboration
- ✓ Creates a digital repository for future academic reference

The system supports digital transformation goals and improves overall academic project management efficiency.
