WHAT IS WAQAA?

WAQAA is a trusted device management system that adds a device authorization layer to existing OTP-based authentication. A received OTP can only be activated on a device that user has previously registered and authorized. Any attempt to use an OTP from an unrecognized device will be blocked, regardless of the OTP validity.

Phishing

SIM-Swapping

MITM Attacks

Your OTP is only as secure as the device it comes from. Waqaa ensures authentication is granted only when the right OTP meets the right device so a stolen code alone is never enough.

STANDEr OTP

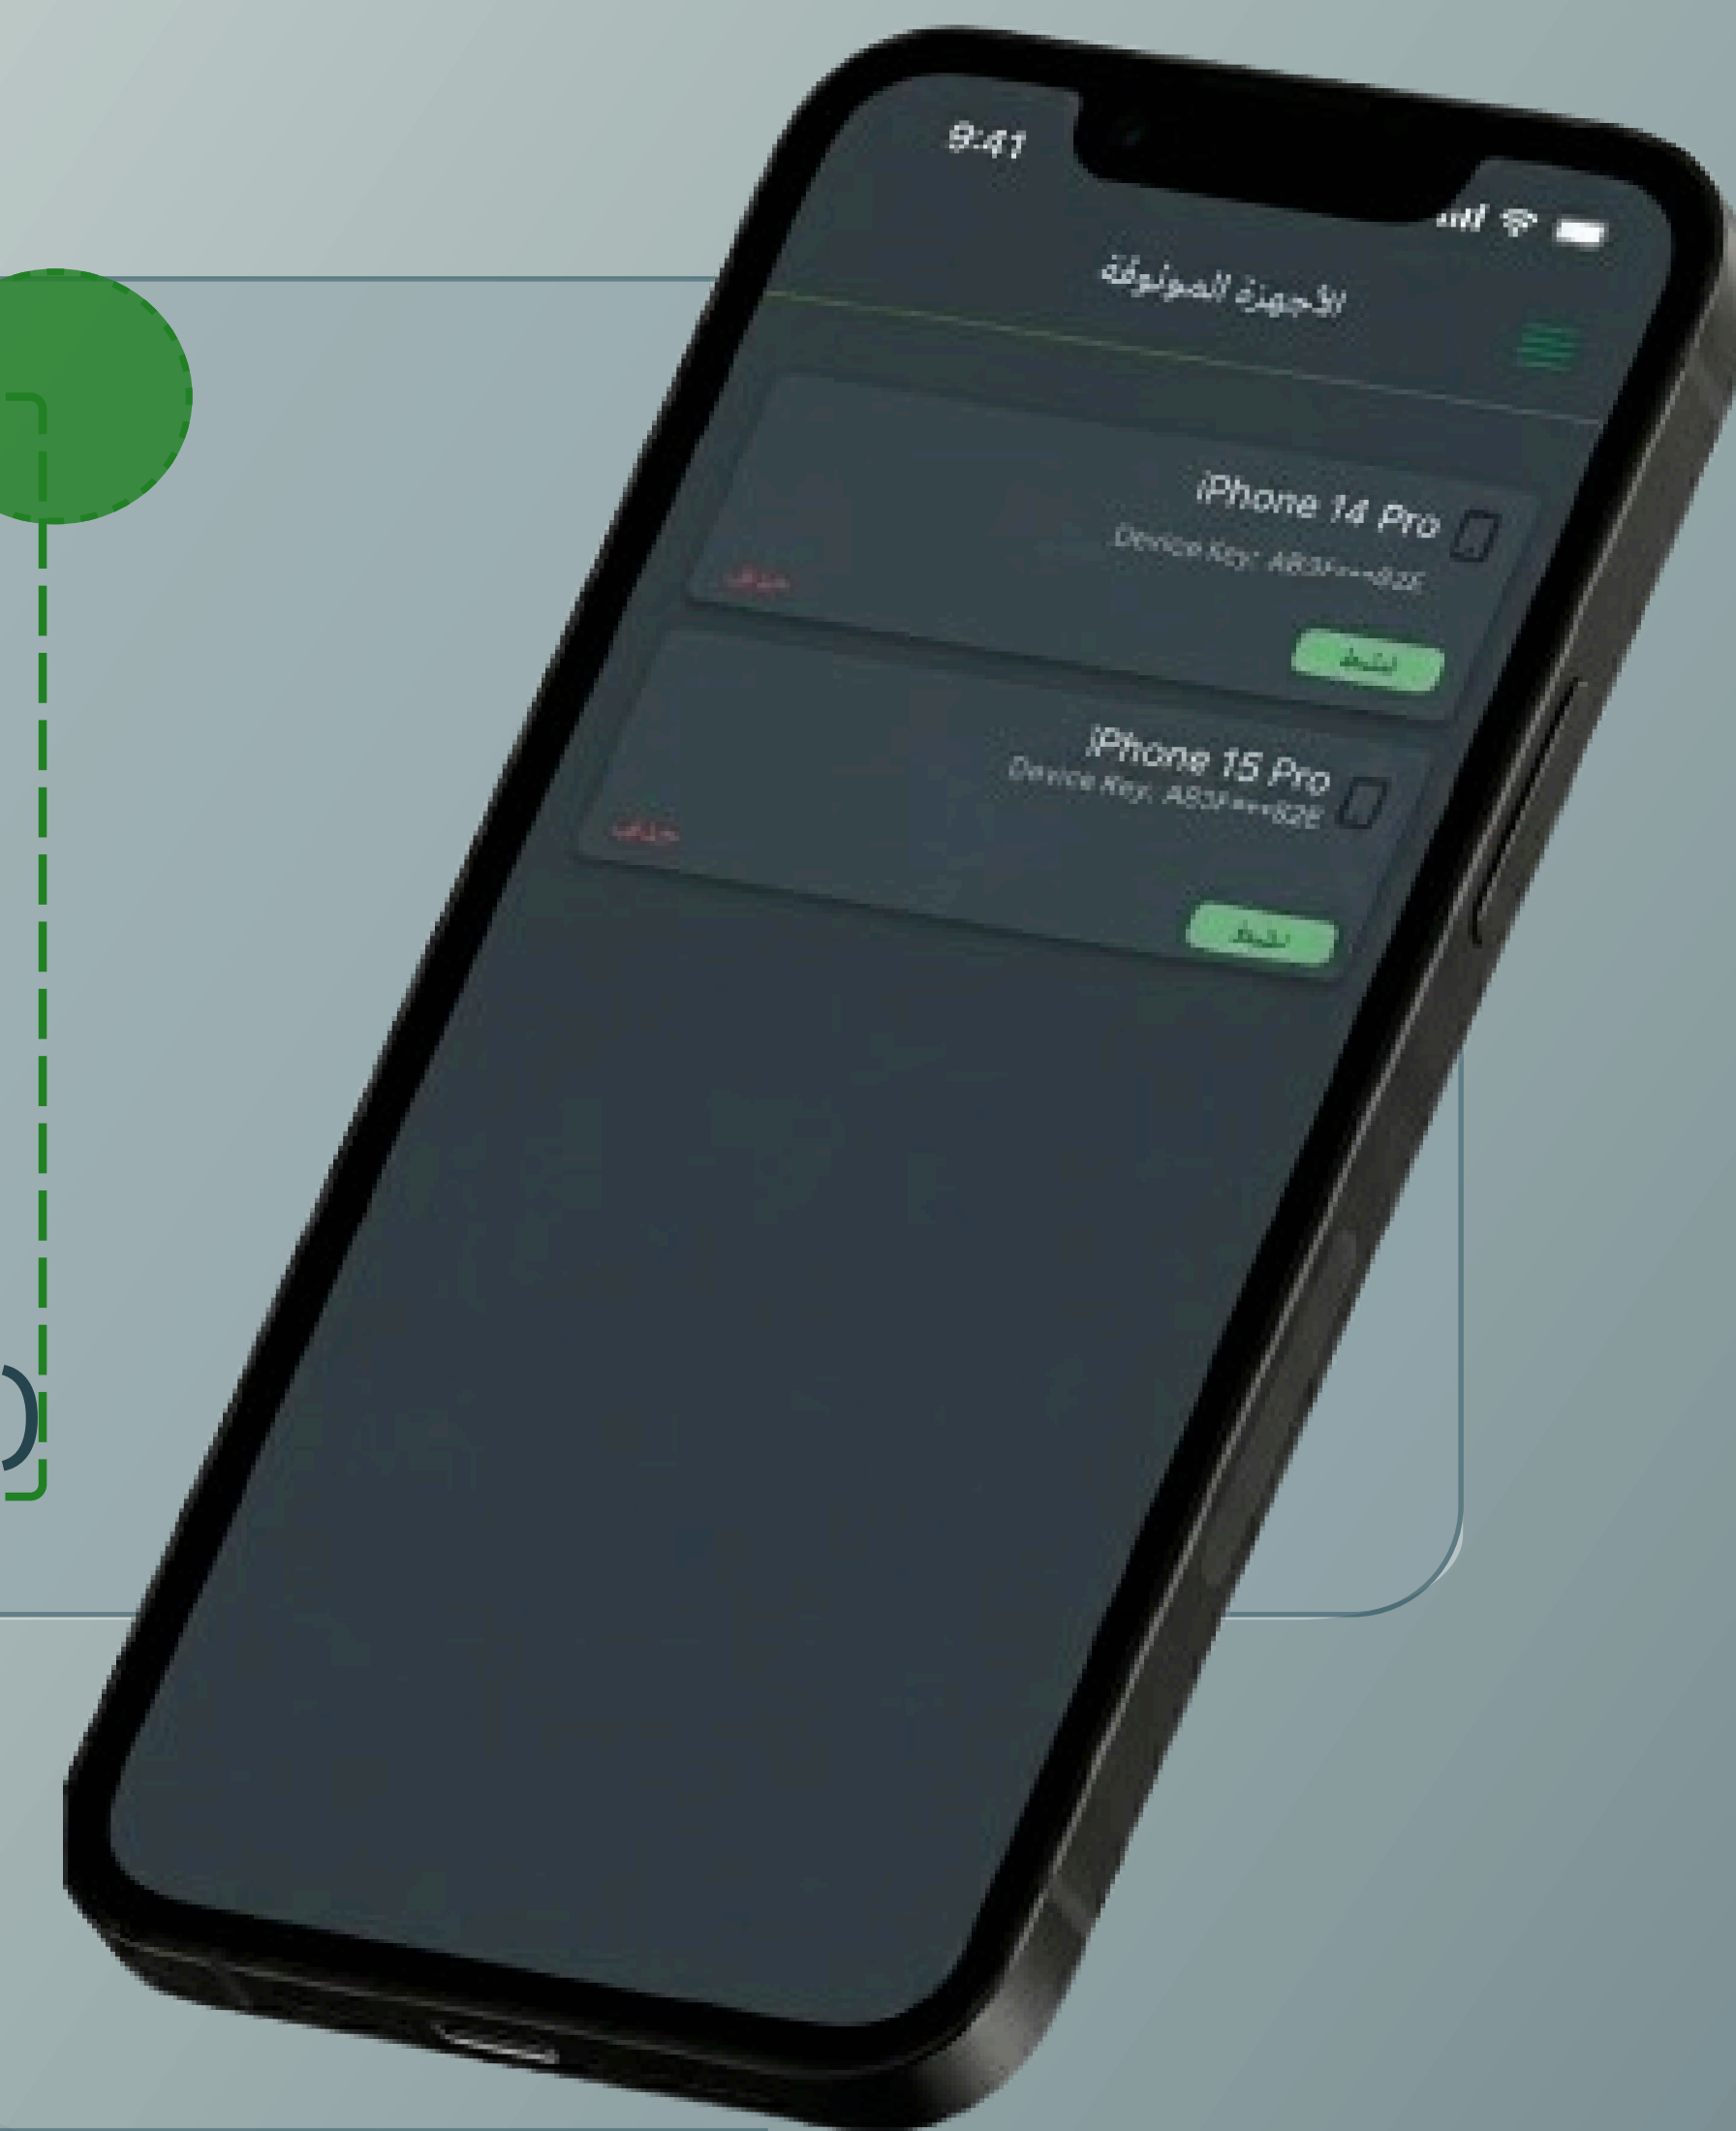

OTP Code Only
(Usable Anywhere, by Anyone)

Why WAQAA?

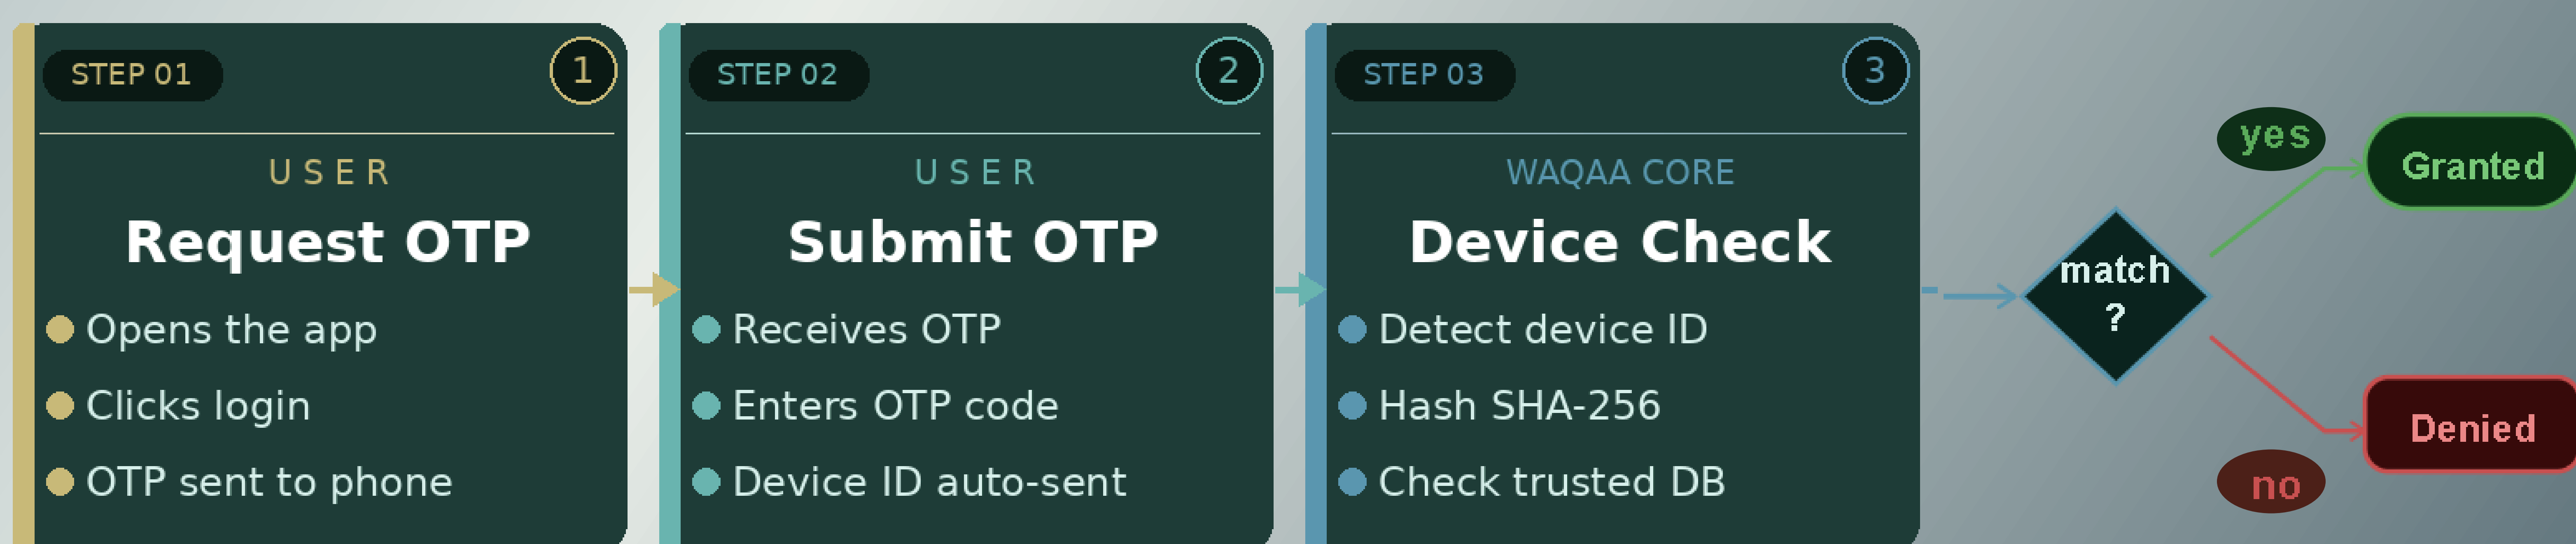

WAQAA

OTP + Trusted Device ID
(Usable ONLY on YOUR Trusted Devices)
