

QASSIM UNIVERSITY - COLLEGE OF COMPUTER  
DEPARTMENT-COMPUTER SCIENCE

➤ INTRODUCTION:

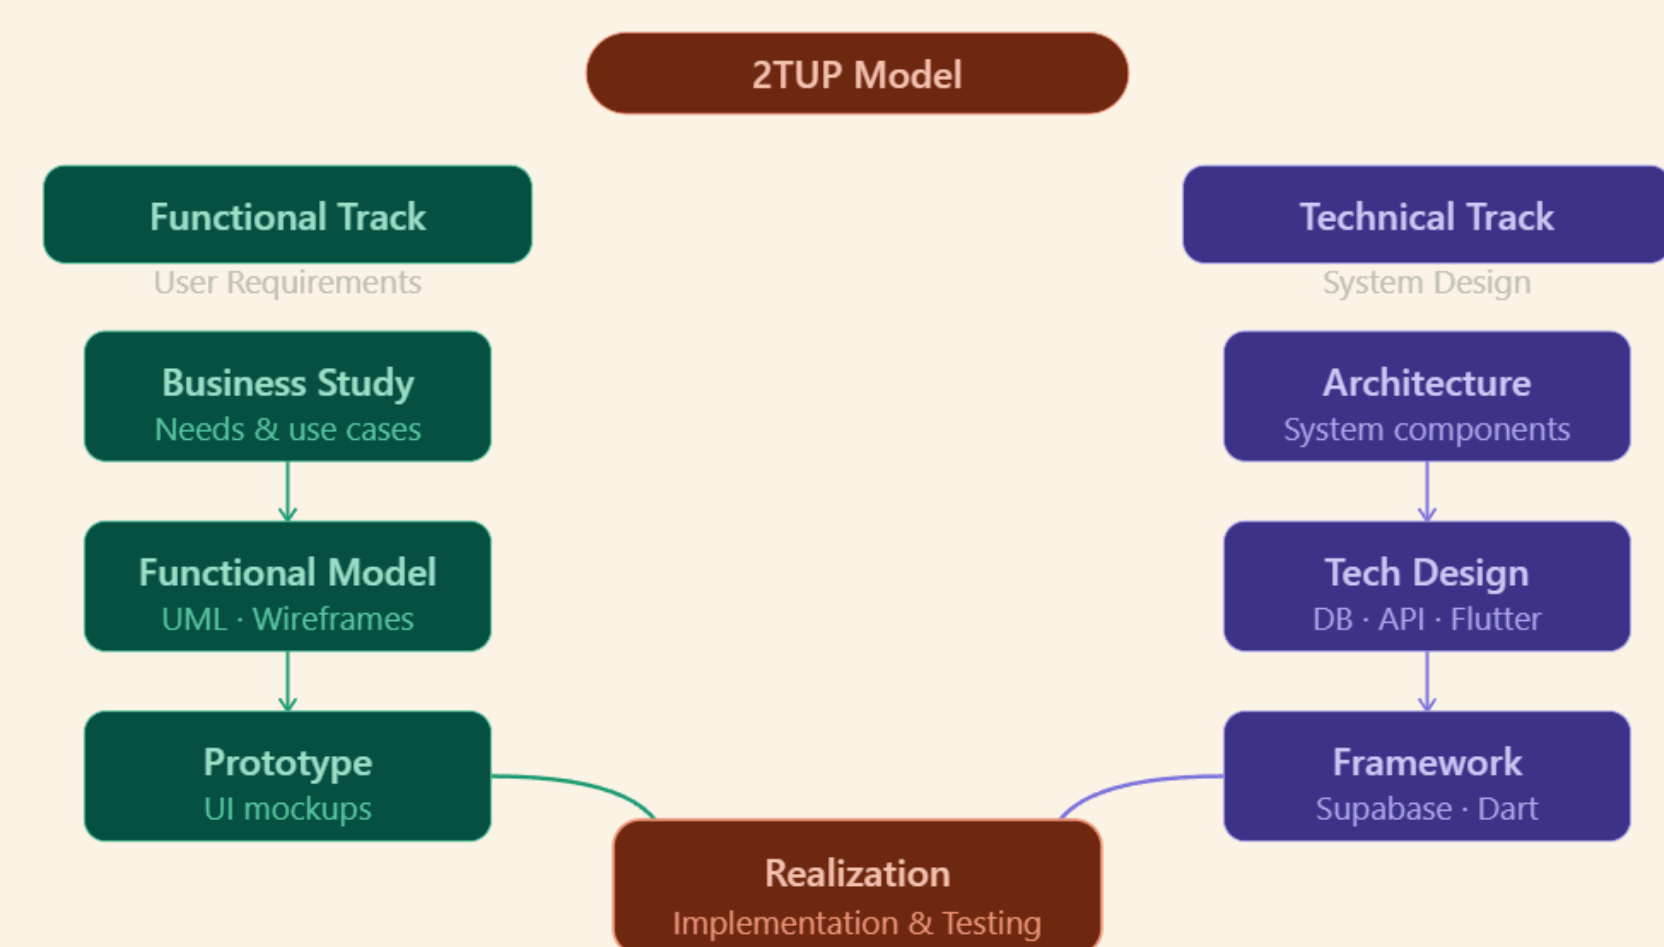

Qout is a mobile recipe-sharing application that helps users discover, create, and share recipes in an interactive food community. It offers an easy way to explore dishes, review recipes, and connect with people who share the same passion for cooking.

➤ OBJECTIVES:

- ✓ Design and develop an interactive mobile recipe application for users.
- ✓ Help users discover new recipes and cuisines from around the world with easy navigation.
- ✓ Provide step-by-step cooking instructions and enable rating, commenting, and sharing features.
- ✓ Integrate AI features to provide smart recipe suggestions and support content moderation.

➤ METHODOLOGY:

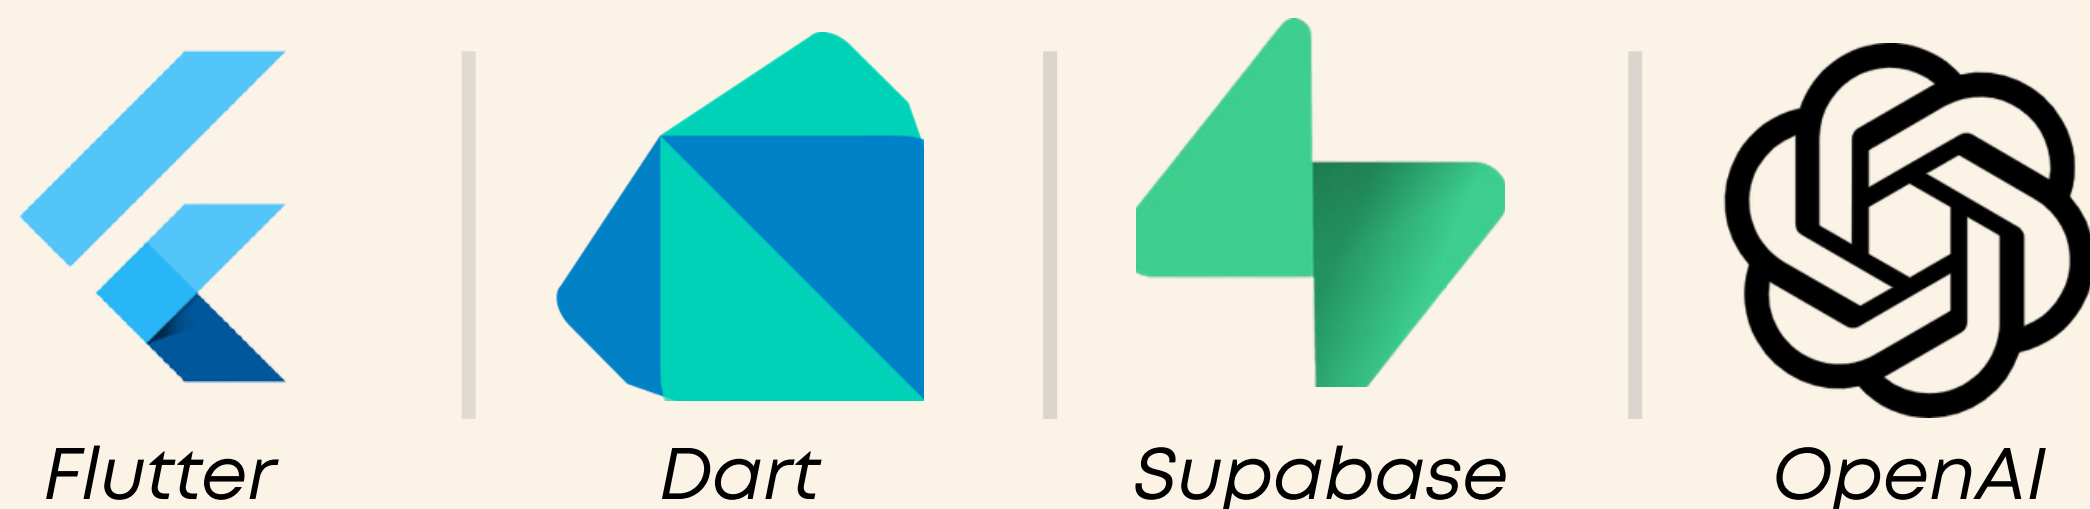

Developed using the 2TUP Model, a dual-track approach that runs functional (user requirements) and technical (system design) streams in parallel, merging at the realization phase for implementation and testing.
